Standing Pose only.

Though the development of innovative metal fittings at the neck, waist, thigh, knee, and arm, the KCI male mannequin can be positioned to present the lifelike posture and suggested movement of a human being. Essential to the safe display of period costume, KCI male mannequins can accommodate a wide range of sizes with the adjustable metal fittings at the waist, thigh and knee. A flexible metal pipe in the place of the arm and thigh make subtle articulation possible.

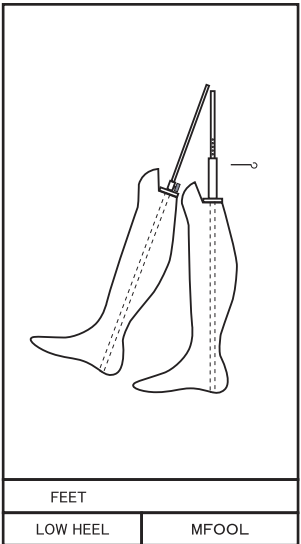

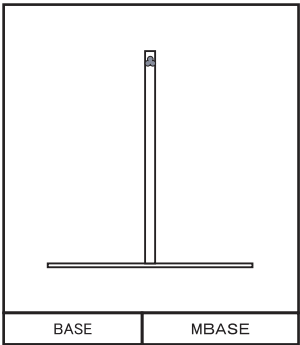

Note: The leg through which the support pole runs(right or left side optional) cannot be adjusted.

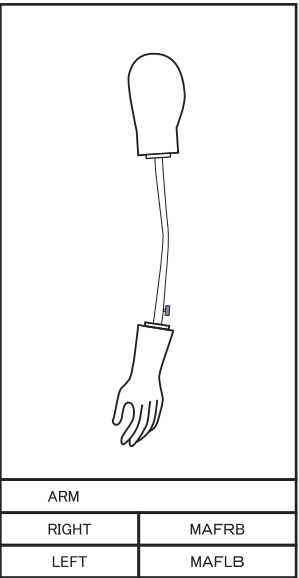

The Torso:
The waist can be lengthened or shortened by the placement of the vertical pin. The front to back angle of the upper torso can be adjusted by the placement of the radial pin.

The Head:
The neck can be rotated 360 degrees
The chin can be angled up or down.

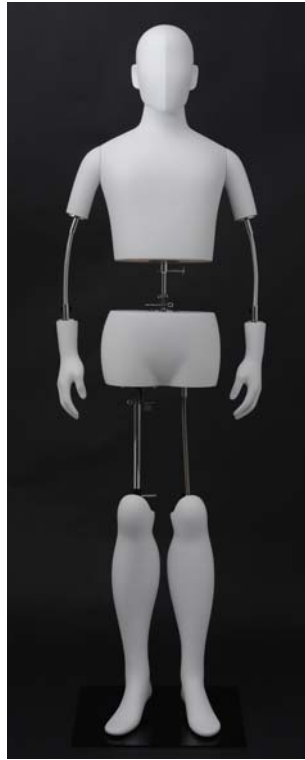

The Feet:
The feet can be pivoted from the upper thigh and the knee, by small degrees, to turn in or out.

The Arm:
The arm can be rotated 360 degrees at the shoulder
The length of the arm is adjustable at the wrist.

THE 18TH CENTURY MALE MANNEQUIN
